

EDUCATION

Chelmsford County High School for Girls

This flagship education construction project included a modern sports hall facility, tennis courts and a science-focused teaching block.

Both buildings comprised a mixture of steel frame and traditional masonry construction on standard foundations. The sports hall features a Junkers floor with a full range of sporting options, dance, fitness and changing rooms (including showers and disabled facilities). The new science teaching block includes office, storage, and preparation rooms. External works comprised a covered social area, tarmac tennis courts, a lift and escape access to an existing teaching block and landscaping.

The majority of construction works took place during a live school environment. Our team delivered the scheme for the 2021/22 academic year. As a separate project, we are converting and refurbishing the school's previous sports hall into a new library and educational facility.

-  Location: Chelmsford
-  Client: Chelmsford County High School for Girls
-  Architect: Duncan Clarke & Beckett
-  Project Manager: PCH Associates
-  Project Value: £6.5m
